Janardan Revuru

Director of Engineering · Enterprise Infrastructure and Storage · Scaling global teams · Engineering Transformation to AI-Native

Bengaluru, Karnataka, India 560100 +91 8050780608 janardan.revuru@gmail.com
LinkedIn: linkedin.com/in/rjanardan Portfolio: https://janalogy.com Research: knowledgesidekick.org

Professional Summary and Experience

A hands-on leader with multi-dimensional skills in system design, SDLC process and AI deep tech, who can lead the AI-native transition for a small startup to a big enterprise. Specialised skills in vision, plan and act as a change agent in the organisation.

Seeking: Engineering leadership roles at AI-first startups and AI platform companies serving enterprises

Agentic AI and AI-native delivery

- Leading adoption of agentic AI: moved about 600 engineers across a multi-geography business unit, 540 of them outside my line, from AI-assisted coding to agentic-AI workflows using spec-driven development and an AI harness; 3x productivity, +30% engagement
- Worked with Dell IT to fine-tune on-prem code models to a million-line codebase and evaluated per-team code-generation effectiveness
- Built on the org's AI harness and LLM architecture documentation to create knowledge layer for grounded, non-hallucinating answers
- Downstream use cases: Wiki creation and update part of Agentic loop, reverse traceability, scenarios analysis querying the model, optimisation of system test scenarios with 80% cost savings.
- Knowledge layer for deep context in AI systems: Grounding, trust, security through knowledge layer in Agentic AI systems (PhD research proposal, REVA University)

Engineering leadership and org building

- Built engineering teams from the ground up to 100 engineers across 3 sites: led a 60-engineer line directly and, as site leader, grew the site to 100, with global reporting and a one-team culture
- Manage senior managers, architects, and product owners; hire and coach niche hardware, file-system, and security talent
- Ran communities of practice as Senior Engineering Manager: the Engineering Manager Community of Practice, plus DevOps, tooling, and innovation workshops
- Graduated from the LEAD program, top 2% of Dell Technologies leaders
- Top-decile team engagement scores

Enterprise product engineering and customer experience

- Led engineering for management and supportability software across enterprise data-protection appliances and distributed storage systems, covering file, block, and object storage, storage tiers, backup and recovery, appliance serviceability, security, REST APIs, GUI, microservices, and observability
- At Dell, responsible for system management of a distributed Kubernetes-based data-protection product; used AI to bring GUI delivery in by 6 months, enabling early customer demos and timely product decisions
- Led the engineering side of UX/UI for three version-1 enterprise products across HPE, Dell and Tasman Networks: simplifying underlying complexity, one design system across the portfolio, and API-first compliance (OpenAPI, Redfish); co-inventor on 3 granted UX patents
- Led engineering for the Data Domain Virtual Edition API based life cycle management in AWS, Azure, and Google Cloud
- Led engineering work in integration with CloudIQ, a Dell SaaS monitoring application for enterprise products, covering AI-driven intelligence, observability, and continuous upgrades
- Built and deployed machine-learning models into production data-protection appliances: capacity projection using AutoML, and ML-driven support-cost reduction of 50%
- Modernized the web technology stack from GWT to Angular in the Data Protection domain
- Delivered appliance supportability and serviceability for the PowerProtect DD backup and recovery appliance
- Customer experience and sustenance for the EMEA region for a secure-router product, including customer-satisfaction tracking and SLO monitoring in a customer-experience and sustenance role (Nortel/Avaya)
- Early career: network management software, GSM 2.5G features (location update, lawful interception), and router element-manager software (Wipro, Amber Networks, Siemens, Tasman Networks, Motorola)

Agile transformation and delivery discipline

- Led Dell's Agile transformation three times, an additional responsibility over about 7 years held by influence rather than line authority: waterfall to Agile Scrum (VersionOne, SAFe), then Scaled Scrum with Scrum@Scale, then across the Infrastructure Solutions Group; wrote the tutorial decks, certified 100% of employees and leaders in Scrum, and ran portfolio-level executive Scrum events

- Defined, measured, and improved Agile and AI metrics in transformation programs applied to teams outside my line of reporting, and reviewed transformation metrics and progress to executives monthly
- Recognized with the Senior Vice President's Game Changer award for the transformation work
- Leading transformations in delivery methodology and AI-native ways of working

Technical Capabilities

Web and languages — TypeScript, JavaScript, Node.js, Java, Python, HTML/CSS, Angular
Cloud — Google Cloud, Vertex AI, AWS, Azure
AI / Machine Learning — PyTorch, TensorFlow, Hugging Face, fine-tuning models, model evaluation
Agentic AI — LangGraph, Hermes Agent, Claude Code, Ollama, LiteLLM, DeepSeek API, Model Context Protocol (MCP)
LLM familiarity — evaluated local and online models: Gemma, LFM, Qwen, Ministral, GLM, Claude, ChatGPT, Gemini, DeepSeek, Nemotron
Retrieval, grounding and knowledge representation — Retrieval-Augmented Generation (RAG), pgvector, Google Open Knowledge Format (OKF), RDF/OWL, SPARQL, JSON-LD, schema.org
Data and databases — PostgreSQL, SQLAlchemy, Alembic
Containers and orchestration — Kubernetes, Docker
Delivery and DevOps — continuous integration and continuous delivery, automation-first, observability (OpenTelemetry, Arize Phoenix), telemetry, monitoring
Storage and data protection — File, block, and object storage; NAS, SAN, SDS; storage tiers; backup and recovery; distributed storage; appliance supportability; serviceability; SMI-S
Systems and infrastructure management — Server and storage management; REST APIs (OpenAPI, Redfish); GUI; microservices; distributed systems; security; customer supportability
Research areas — PhD in progress
Neuro-symbolic AI — Typed schemas (Pydantic), symbolic reasoning and grounding (Prolog, Lisp)

Career History

Dell Technologies | Director of Engineering | Aug 2021 – Sep 2026
Dell Technologies | Senior Manager | Dec 2016 – Jul 2021
Hewlett Packard Enterprise | Engineering Manager | Mar 2011 – Dec 2016
Nortel (acquired by Avaya) | Customer Experience and Sustenance | Nov 2007 – Feb 2011
Motorola | Engineering Manager | Aug 2005 – Nov 2007
Tasman Networks (acquired by Nortel) | Technical Architect / Manager | Nov 2003 – Aug 2005
Siemens Technology India | Technical Leader | 2001 – 2003
Amber Networks (acquired by Nokia) | Software Engineer | Aug 2000 – Aug 2001
Wipro | Software Engineer | Nov 1996 – Feb 2000

Industry and Academic Engagement

Developed multiple tech communities (meetups) that aggregate to 22K members across India and beyond. Conducted 100+ events over the last 11 years at companies including Google, Microsoft, Navi, Brillio, Dell, HPE, Nutanix, IBM, GeekyAnts, and Roku.

Academic and research mindset with an M.Tech in Data Science and AI from BITS Pilani; currently pursuing a part-time PhD in AI (agent to agent communication architectures). Official mentor to employees pursuing M.Tech from BITS Pilani. Authoring the book "Mastering TypeScript" for BPB publications. Editor and maintainer of knowledgesidekick.org, an open research site on knowledge-first practice for Agentic AI, with agent-generated content human-reviewed under editorial rules I set. My PhD research proposal is published there.

Skills

Engineering leadership: Team seeding and scaling; AI-native delivery

Enterprise infrastructure: Server, storage, and networking; scaled Agile and architecture review; community and talent attraction

Education

PhD in Artificial Intelligence, REVA University

Expected in June 2028 (part-time, working professional). Research in the field of multi-agent systems knowledge and communication architectures.
Research proposal: knowledgesidekick.org/phd/submission-1.html

Master of Technology in Data Science, Birla Institute of Technology and Science, Pilani

June 2024. Project: Sustainability through Small Generative Models.

Bachelor of Engineering in Computer Science, Vijayanagar Engineering College

Master of Business Administration in Marketing, Indira Gandhi National Open University

Certifications and Awards

- Project Management Professional (PMP)
- Certified Scrum Master
- SAFe Agilist
- Six Sigma Green Belt
- Certified Financial Manager
- Game Changer award for Agile Transformation
- Top-decile team engagement scores

Community Engagement

- Founder and organizer of tech communities with total 22K members; hosted 100+ events
- JavaScript Meetup (since 2015)
- Data science, Artificial intelligence, Research and Learning (DARLing) Meetup (since 2025)
- Byte of Python (since 2025)

Affiliations and Advisory Roles

- Academic Council, Madanapalle Institute of Technology and Science (since 2025)
- Board of Studies, Kishkindha University (since 2024)
- Association of Computer Machinery (ACM) member (since 2024)
- Community leader, Google (since 2020)
- Open Source India conference (since 2011)
- Technical Director, Huawei HarmonyOS Platform (till 2021)
- Web Technologies Advisory Group, Microsoft (till 2018)

Patents (with co-inventors)

- Systems and Methods for Temporary Access with Adaptive Trust Levels for Authentication and Authorization, US 20220337596, issued October 20, 2022.
- Parameter-Based Adaptive Scheduling of Jobs, US 20240354154, issued October 24, 2024.
- Systems and Methods for Temporary Access with Adaptive Trust Levels for Authentication and Authorization, Extension, US 20240244058, issued April 8, 2025.
- Suggesting and Validating User Interface Elements in Accordance with a Design System, US 20260203081 A1, published July 16, 2026.

Closing

For 30 years I have built and scaled engineering teams from the ground up: networking and telecom, then server high availability, then the last decade in storage and data protection. I grew an infrastructure management software org from 2 to 100 engineers across three sites as site leader, leading a 60-engineer line directly, and led the shift to agentic-AI workflows across about 600, tripling productivity. Seeding teams that deliver and lead with AI-native engineering and a culture of experimentation. I bring that blend to both: an execution leader with a researcher's mindset, still hands-on in my PhD work on multi-agent systems.
