Janardan Revuru

Engineering Leader | Enterprise Software Development, Cloud and Delivery Discipline | Scaled global teams

Bengaluru, India +91 8050780608 janardan.revuru@gmail.com
LinkedIn: linkedin.com/in/rjanardan Portfolio: https://janalogy.com

Professional Summary

Engineering leader who acts a player-coach with experience in enterprise products using modern stack across networking (data and telecom), servers, and storage. Grew the India function from 2 to 100 through hiring, and led 5 leaders and up to 60 engineers across 3 sites with global reporting. Shipped three version-1 enterprise products from embedded to cloud-scale. Proved AI-assisted engineering at 60 engineers, then led it across a 600-engineer, multi-geography business unit by influence for about 7 years, an additional responsibility of about 30 percent of the role. With strong system design concepts, maintains a balance of customer expereince and cost. Complete ownership of development and operations (DevOps) practice carried through an established continuous integration and continuous delivery pipeline, with production observability, and consistently top-decile team engagement.

Open to: Director, Senior Director and Head of Engineering roles leading multi-team delivery in application development, cloud and infrastructure software.

Selected Outcomes

3 version-1 products · shipped at Dell, HPE and Tasman Networks
60 then 600 engineers · AI-assisted engineering proved inside the line, then across the business unit by influence: 3x productivity, 30% higher engagement
2 to 100 engineers · built with 2% attrition against a 7% organization average
85% say/do ratio · up from 50%, with velocity up 2x to 5x
Continuous delivery and observability · CloudIQ monitoring service: release discipline on an established pipeline, production telemetry, 40% of systems in the field
80% faster time to resolve · support cases down 50%
3 cloud provider deployments · Data Domain Virtual Edition lifecycle management on Amazon Web Services, Microsoft Azure and Google Cloud

Core Strengths

- Application development: Java, web technologies (Angular, TypeScript), application programming interfaces (REST, OpenAPI, Redfish), PostgreSQL and SQLite
- Cloud and cloud-native delivery: Amazon Web Services, Microsoft Azure, Google Cloud; Kubernetes-based distributed products
- Continuous delivery: shipping on an established continuous integration and continuous delivery pipeline, release discipline, upgrade compatibility across versions
- Observability: product monitoring, alerting and field telemetry in a software-as-a-service monitoring platform
- Organization building and talent: 2 to 100 engineers, 5 leaders, global reporting and one-team culture
- Management and supportability software: the management plane of enterprise systems
- Storage, backup and recovery appliances: supportability, serviceability and SMI-S
- Roadmap, release and customer escalation ownership
- Scaled Agile, delivery governance, and AI-assisted engineering at 600-engineer scale

Experience

Director of Engineering, Dell Technologies, Aug 2021 to Sep 2026

Previously · Senior Manager, Dell Technologies, Dec 2016 to Jul 2021
Line responsibility: 5 leaders (senior managers, architects, product owners) and up to 60 engineers across 3 sites with global reporting; owned management and supportability software for PowerProtect DD and for a distributed Kubernetes-based data protection product with 5 early-preview customers. The application stack for the management software in the Senior Manager period was Java, web front ends and application programming interfaces, with SQLite embedded storage, PostgreSQL, and a time-series extension for metrics. Built the India function to 100 through hiring. Additional responsibility, about 30 percent of the role: led Agile and AI transformation across a 600-engineer, multi-geography business unit for about 7 years, 540 of them by influence rather than line authority, working with product management, design, support and engineering leaders.

- **Built the organization.** Grew the India function from 2 to 100 through hiring, with global reporting and one-team culture; hired and coached user experience, control path and security talent; held top-decile engagement scores, with attrition of 2% against a 7% organization average.
- **Proved AI-assisted engineering at 60 engineers first.** Moved the 60 engineers and 5 leaders in the line from AI-assisted coding to spec-driven development on an AI harness, and defined the adoption metrics that later governed the wider rollout: installation, weekly and daily use, and code-generation effectiveness per team.

- **Then scaled it across the business unit.** Moved about 600 engineers, 540 of them outside the line, from AI-assisted coding to agentic workflows using the same harness: 3x productivity and 30% higher engagement. Worked with IT to fine-tune the integrated development environment and on-premise code models to a million-line codebase.
- **Delivered product faster.** Used AI to bring graphical interface delivery for a Kubernetes data protection product forward by 6 months; the early build went to Technical Marketing for previews with 5 customers, whose feedback reprioritized work before Beta and enabled customer demonstrations ahead of plan.
- **Delivered a software-as-a-service product on a continuous delivery cadence.** Led integration with CloudIQ, later repositioned as AIOps (artificial intelligence for information technology operations), reaching 40% of systems in the field: AI-driven insight, observability, telemetry and continuous upgrades. Team responsibility was release discipline, upgrade compatibility and production observability, delivered through the organization's existing continuous integration and continuous delivery pipeline.
- **Cut support cost and time to resolve.** Delivered supportability and serviceability for the PowerProtect DD backup and recovery appliance across serviceability, security, REST APIs, graphical interface and observability, reducing support cases by 50% and mean time to resolve by 80%.
- **Opened cloud as a delivery channel.** Led API-based lifecycle management for Data Domain Virtual Edition in AWS, Azure and Google Cloud, reaching 25 cloud deployments.
- **Modernized the stack.** Moved the Data Protection web stack from Google Web Toolkit to Angular, shortening the interface release cycle by 30% and reducing interface defects by 50%.
- **Changed how the company delivers.** Led Dell's Agile transformation three times, an additional responsibility over about 7 years held by influence rather than line authority: waterfall to Scrum, Scrum@Scale, then across the Infrastructure Solutions Group. Certified 100% of employees and leaders and ran portfolio-level executive Scrum events. Earned the Senior Vice President's Game Changer award. Velocity increased 2x to 5x and say/do predictability improved from 50% to 85%.

Engineering Manager, Hewlett Packard Enterprise, Mar 2011 to Dec 2016

Managed three teams building management software for the HPE high-availability clustering product for business-critical applications, and coordinated a 25-engineer project team on clustering and disaster recovery for HP-UX.

- **Lowered customers' operating cost.** Supervised the architecture and implementation of a multi-cluster manager on a modern technology stack (Java, application programming interfaces, web front end, PostgreSQL), which reduced customers' overall operational cost by 20%.
- **Protected mission-critical applications.** Gave management oversight to the disaster recovery program, working closely with EMC as storage partner, and delivered a disaster recovery solution for short and long distance clusters, with 3 greenfield deployments.
- **Set direction on a strategic platform.** Gave technical oversight to the HP OneView Network module, part of the strategic HPE composable infrastructure built on a new software stack.
- **Built a high-performing team.** Transformed three teams into a high-performing group with higher employee engagement.

Earlier Career, 1996 to 2011

Nortel and Avaya (2007 to 2011): led EMEA customer support engineering for an access router repurposed and rebranded as a secure router. Motorola (2005 to 2007): Engineering Manager for the Operations Management Center covering GSM. Tasman Networks (2003 to 2005): delivered a version-1 router element manager in 9 months, including hiring a new Bangalore team. Siemens Technology India (2001 to 2003): technical leader for GSM 2.5G features including location update and lawful interception. Wipro and Amber Networks (1996 to 2001): network management and edge-router management software.

Education and Certifications

- **PhD in Artificial Intelligence**, REVA University, part-time, expected June 2028
- **Master of Technology in Data Science and Artificial Intelligence**, BITS Pilani, 2024
- **Bachelor of Engineering in Computer Science**, Vijayanagar Engineering College; **Master of Business Administration in Marketing**, Indira Gandhi National Open University

Certifications: Project Management Professional (PMP) · Certified Scrum Master · SAFe Agilist · Six Sigma Green Belt · Certified Financial Manager

Patents, Recognition and Community

- US 20220337596 and US 20240244058: adaptive-trust authentication and authorization (granted)
- US 20240354154: parameter-based adaptive scheduling of jobs (granted)
- US 20260203081 A1: design-system-aware interface validation (published)
- Dell Senior Vice President Game Changer award · LEAD program, top 2% of leaders

Founder of technology communities with 22K members and 100+ events in 11 years (Google, Microsoft, Dell, HPE, Nutanix and IBM among others). Academic Council, Madanapalle Institute of Technology and Science; Board of Studies, Kishkindha University; mentor to employees pursuing the BITS Pilani Master of Technology.
